

Emails with and without attachments

EMAILS IN GENERAL

There are about 5.59 billion active email accounts worldwide.

293.6 billion emails were sent and received every day in 2019.

CARBON FOOTPRINT

Sending and reading electronic mail uses up energy and causes CO2 emissions.

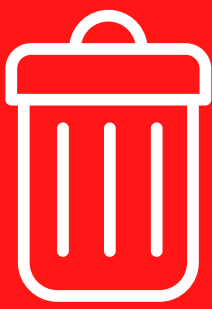

65  = 1 km with 

According to the study, the entire global energy requirement for email is about as high as the annual electricity consumption of Austria or Switzerland.

GREEN EMAILS

Green email refers to an email service that uses only renewable energy to run its service.

If every person in the world deleted 11 mails a day, this would save around 91,000 tons of CO2 per year!

Email attachments

Share links can provide much more control over sent files.

Email attachments vary in size and can significantly increase the size of the sent mail. The bigger the size of the mail, the bigger the consequence to the Earth.
