

Kick-off Meeting project unit „Internet Crime and Security Measures“

Introduction:

In this project unit we will have to prepare power point presentations on the topics „Internet Crime and Security Measures“ in teams consisting of German and Estonian students. We will start working on these presentations during the visit of Estonian students to Germany. We will decide on the topics to be dealt with in the presentations, build teams and discuss further steps.

After the visit to Germany all teams have to work on their presentations online. These presentations will have to be finished by 1 May. They will be presented and assessed by all students and teachers involved in the project during the visit of the German students to Estonia on 13 May.

On the basis of these presentations, all teams will have to make up questions and answers referring to the content of their presentation which can be used in a multiple-choice programme. This computer-based training is aimed at all students at both colleges. **At the end of the Erasmus project, all students (IT and non-IT) students will be able to train their skills regarding internet crime and security measures using this software.**

The German group will be responsible for programming the computer-based training. We already discussed the features of the programme with all students and teachers involved during our skype session in November 2016. All teams will be responsible for preparing questions, correct and incorrect answers to the questions to be used for the computer programme. During the visit to Estonia in May 2017, all teams can insert and discuss all questions and answers to be included in the software tool.
